

DJ874

Electromagnetic counter are used in recording cumulative total of the number of times of electronic pulse signal. It can be composed the digital indicator with the second apparatus, widely applied in petroleum, chemical, engineering, textile, mechanic, mine, national defense, agriculture, food and printing etc all works of life's electric impulse counter. After input the electric signal to the counter, produce the suction in electromagnet in order to let gag bit spur escapement mechanism then spur the digital rotate cycling calculating in decimal scaler.

Technical Indexes

Counting Range: 0-9999

Voltage classification: DC6V---220V AC24V---220V

Calculating speed: DC \leq 20/s AC10/s

Powder: DC1.5W AC2.5VA

Reset mode: pressing mode

Overall Dismension: 80*35*31mm

Mounting Dismension: 27*32mm
